

Employee Order Portal Integration with ERP

A leading clinical skincare brand improves its business operations & trading partner communication using RPA & Oracle EDI/eCommerce gateway

Customer Profile:

The customer is a US based organization, that pioneers in clinical skincare brand dedicated to encouraging people to live happier, healthier and more fulfilling lives. This makes them a key player in the personal care prestige segment. Creates a common platform for all the E-Commerce Level of the executions. It is the first modern doctor brand since 1989.

Objective

The main objective of this project is to create an Employee Portal where all the users can create orders and Track them on one platform. It just like an E-commerce Portal where one create orders , Whole execution need to be done with in a short span of time with an user friendly approach. All the Integration services will do their job from the login to the order creation. The Admin and the user will have different access base on the requirement.

Business challenges :

- Braintree Payment Gateway Execution
- Creating sales order using SQL have been one of the major task to be executed
- Creating the user friendly Portal to all the users
- High level Integration Data Flow
- Process flow of creating and placing order in the front end and Backend
- Orders process using the eZintegration

Solutions

- Created the Braintree payment API for all the payments in the Portal
- Creating SQL with perfect logic which would help in the smooth execution of all the steps in the Portal.
- Option to download the quantity change whenever an user changes and updates the quantity
- Sales order,tracking,order status etc, have been updated and tracked by using our end sql and the Portal

Future Scope:

- We can easily create any kind of E-Commerce website using this approach
- A Pictorial representation by using the Dashboards regarding all the Activities in Portal, which would help in the best way of understanding.
- Privacy and security will be in high end by using the Braintree Payment gateway which we have implemented already and can be updated further
- Any new requirement or changes can be done with in a fraction of seconds using our eZintegrations Platform

Why BIZDATA:

- Connect any on-premise business application
- No customer library, staging, or buses needed
- No coding or programming is required
- Reduce time and Cost
- Increase in Productivity
- Improve Efficiency
- Complete visibility on data transportation through dashboards and reports.
- Integrate Faster
- User Friendly to create orders and manage the portal
- High end payment Gateway for all the orders and payments
- New way of approach to track and download the orders and order changes
